

## SCHEDULE C

### TECHNICAL AND ORGANISATIONAL MEASURES

#### 1. Confidentiality (Art. 32 para. 1 lit. b GDPR)

##### 1.1 Access control to premises and facilities (physical access control)

| <b>Access control to premises and facilities</b><br><b>Unauthorized access to premises and facilities must be prevented, whereas the term is to be understood spatially.</b> | <b>existent<br/>yes</b> |
|--|-------------------------|
| Electronic access code card / access transponders  | X                       |
| Access authorization concept   | X                       |
| Video surveillance   | X                       |
| Key management   | X                       |
| Visitor badges   | X                       |
| Escorting of visitors' access by our own employees   | X                       |
| Attendance records of visitor accesses   | X                       |
| Scaled security areas and controlled access  | X                       |
| Separately secured access to the data center   | X                       |
| Storage of servers in locked rooms   | X                       |
| Instruction for issuing keys   | X                       |

##### 1.2 Access Control to Systems (Hardware access control)

| <b>Access control to systems</b><br><b>The intrusion of unauthorised persons into the data processing systems or their unauthorized use must be prevented.</b> | <b>existent<br/>yes</b> |
|--|-------------------------|
| Password protection of screens of workstations   | X                       |
| Functional and/or time-limited assignment of user authorizations   | X                       |
| Use of individual passwords  | X                       |
| Automatic locking of user accounts after multiple incorrect password entries   | X                       |
| Automatic password-protected screen locking after inactivity (screen saver)  | X                       |
| Password policy with minimum requirements for password complexity:   |                         |
| ▪ Minimum of 8 characters / upper and lower case, special characters, numbers (of which at least 3 criteria)   | X                       |
| ▪ Prevention of trivial passwords (e.g. Dog1, Dog2, Dog3)  | X                       |
| ▪ Password history (no re-use of the last 5 passwords)   | X                       |
| Procedure for the assignment of authorisations with the entry of employees   | X                       |
| Procedure for revocation of authorisations due to department change of employees   | X                       |
| Procedure for revocation of authorisations due to exit of employees  | X                       |
| Obligation to confidentiality / data secrecy   | X                       |
| Logging and regular evaluation of system usage   | X                       |
| Controlled destruction of data carriers  | X                       |

##### 1.3 Access control to data (software access control)

|  |                               |
|--|-------------------------------|
| <b>Access control to data</b><br><b>Unauthorised activities in data processing systems outside of assigned authorisations must be prevented.</b> | <b>existent</b><br><b>yes</b> |
| Definition of access authorization, authorization concept  | X                             |
| Restriction of free and uncontrolled query options for databases   | X                             |
| Regular evaluation of logs (log files)   | X                             |
| Partial access to data stocks and functions (Read, Write, Execute)   | X                             |
| Use of appropriate security systems (software/hardware)?   |                               |
| ▪ Virus scanner  | X                             |
| ▪ Firewalls  | X                             |
| ▪ SPAM-Filter  | X                             |
| Encrypted storage of data  |                               |
| <input type="checkbox"/> e.g. AES, RSA:  | X                             |

#### 1.4 Separation Control

|  |                               |
|--|-------------------------------|
| <b>Separation control</b><br><b>Data collected for different purposes must also be processed separately.</b> | <b>existent</b><br><b>yes</b> |
| Separation of customer data (multi-client capability of systems)   | X                             |
| Authorization concept that takes into account a separate processing of data of different customers           | X                             |
| Separation of development, test and production system  | X                             |

#### 1.5 Pseudonymisation

|  |                               |
|--|-------------------------------|
| <b>(Art. 32 para. 1 lit. a GDPR; Art. 25 para. 1 GDPR)</b><br><b>The processing of personal data in such a way that the data can no longer be attributed to a specific data subject without further information, provided that such additional information is kept separately and subject to appropriate technical and organisational measures</b> | <b>existent</b><br><b>yes</b> |
| Measures:  | X                             |
| PII vault is used to keep personal data  |                               |

## 2. Integrity (Art. 32 para. 1 lit. b GDPR)

### 2.1 Control of transmission

|   |                               |
|---|-------------------------------|
| <b>Control of transmission</b><br><b>Aspects of the transfer (transmission) of personal data are to be regulated: electronic transfer, data transport as well as their control.</b> | <b>existent</b><br><b>yes</b> |
| What is the mode of transmission of data between Controller and third parties?  |                               |
| ▪ Data exchange via https connection  | X                             |
| ▪ Other mode of transmission:   | X                             |
| <input type="checkbox"/> Encryption algorithm used:   | X                             |

|  |   |
|--|---|
| - Hashes are added with a "Salt" or "Pepper"   | X |
| Secured entrance for supply and delivery   | X |
| Documented management of data carriers, inventory control                                    | X |
| Definition of the areas in which data carriers are stored                                    | X |
| Encryption of data carriers with confidential data   | X |
| Encryption of laptop hard disks  | X |
| Encryption of mobile data carrier  | X |
| Controlled destruction of data:  | X |
| Data carrier disposal – Secure deletion of data carriers:                                    |   |
| ▪ Physical destruction (e.g. shredder with particle cut - 1000 mm <sup>2</sup> max.)         | X |
| ▪ Others: e.g. overwriting of tapes and hard drives  | X |
| Backup copies of data carriers that will have to be transferred                              | X |
| Documentation of the bodies to which transmissions are planned and the means of transmission | X |
| Packaging and shipping instructions, encrypted email dispatch                                | X |
| Control of completeness and correctness  | X |

## 2.2 Entry control

|  |                 |
|--|-----------------|
| <b>Entry control</b>   | <b>existent</b> |
| <b>Traceability and documentation of data administration and maintenance must be guaranteed.</b> | <b>yes</b>      |
| Definition of user authorisations (profiles)   | X               |
| Differentiated user authorisations:  | X               |
| Read, modify, delete   | X               |
| Partial access to data or functions  | X               |
| Logging of entries / deletions   | X               |
| Log analysis system  | X               |
| Log concept going beyond OS standard   | X               |
| Dedicated log server   | X               |
| Control of access authorisations to log servers (log admin)                                      | X               |

## 3. Availability and Resilience (Art. 32 para. 1 lit. b GDPR)

### 3.1 Availability control

|  |          |
|--|----------|
| Availability control   | existent |
| The data must be protected against accidental destruction or loss. | yes      |
| Data protection and backup concept                                 | X        |
| Carrying out data protection and backup concept.                   | X        |
| Restriction of access to server rooms to authorised personnel      | X        |
| Fire alarm systems in server rooms                                 | X        |
| Smoke detectors in server rooms                                    | X        |
| Air-conditioned server rooms                                       | X        |
| Lightning / overvoltage protection                                 | X        |
| Water sensors in server rooms                                      | X        |
| Keep backup systems in separate rooms and fire compartment         | X        |

|   |   |
|---|---|
| Ensure technical readability of backup storage media for the future   | X |
| Storage of archive storage media under necessary storage conditions (air conditioning, protection requirements, etc.) | X |
| CO <sup>2</sup> fire extinguishers in the immediate vicinity of the server rooms                                      | X |
| Emergency plan (e.g. water, fire, explosion, threat of attacks, crash, earthquake)                                    | X |
| Observation of the influence of adjacent buildings  | X |
| Vulnerability analysis (terrain protection, building protection, intrusion into computers, computer networks)         | X |
| Storage of data in data storage cabinets, safes   | X |
| UPS system (uninterruptible power supply)   | X |
| Power generator   | X |

### 3.2 Resistance and reliability control

|  |                 |
|--|-----------------|
| Resistance and reliability control<br>Systems must be able to cope with risk-related changes and must be tolerant and able to compensate disruptions.  | existent<br>yes |
| Alternative data centers available (Hot- or Cold-Stand-by?): <b>Cold</b>   | X               |
| Redundant power supply   | X               |
| Redundant UPS system   | X               |
| Redundant power generators   | X               |
| Redundant air conditioning   | X               |
| Redundant fire fighting  | X               |
| Hard disk mirroring  | X               |
| Computer Emergency Response Team (CERT)  | X               |
| Loadbalancer   | X               |
| Data storage on RAID systems (RAID 1 and higher)   | X               |
| Delimitation of critical components  | X               |
| Performance of penetration tests   | X               |
| System hardening (deactivation of non-required components)   | X               |
| Immediate and regular activation of available software and firmware updates  |                 |
| <ul style="list-style-type: none"> <li>▪ Identification of the different devices that make up the network and identification of their hardware version as well as their current software and firmware versions.</li> </ul> | X               |
| <ul style="list-style-type: none"> <li>▪ Communication channel with manufacturers to stay up-to-date on any new updates and patches released for the devices owned.</li> </ul>   | X               |
| <ul style="list-style-type: none"> <li>▪ Definition of time periods in which the updates shall be implemented (e.g. periods of lower operations, maintenance times, etc.)</li> </ul>                                       | X               |
| <ul style="list-style-type: none"> <li>▪ Use of redundant systems to maintain operations while main devices are being updated.</li> </ul>  | X               |
| <ul style="list-style-type: none"> <li>▪ Progressive deployment of updates / patches to detect any issues early without affecting multiple devices.</li> </ul>   | X               |
| <ul style="list-style-type: none"> <li>▪ Specify a testing period to verify the correct implementation of the update and ensure that operations continue to run smoothly with the new updates.</li> </ul>                  | X               |

|   |   |
|---|---|
| Security is included as a main consideration during the design phase of the systems.  |   |
| ▪ Definition of security measures to protect and validate communication between system components.  | X |
| ▪ Limitation of authorizations on a need-to-know basis.   | X |
| ▪ External contractors (service providers) and maintenance personnel must have a specific access, which must only be active during the intervention and remain disabled the rest of the time. | X |
| Periodic security training and awareness campaign within the organisation   |   |
| ▪ Awareness campaigns to inform users of the security concepts of specific systems and traditional IT systems   | X |
| ▪ Specific security training to teach how to apply security measures and behaviours on the daily processes with the least impact possible.  | X |
| Take out cyber-insurance  |   |
| ▪ Identification of the devices, assets, and network systems within the organisation's infrastructure.  | X |
| ▪ Carrying out a risk analysis considering all these systems, devices and assets identified to determine the threats they are exposed to, their likelihood and impact.                        | X |

**4. Procedures for a regular testing, assessing and evaluating (Art. 32 para. 1 lit. d GDPR; Art. 25 para. 1 GDPR)**

**4.1 Control procedures**

|   |                               |
|---|-------------------------------|
| <b>Control procedures</b><br><b>A procedure is to be implemented for regularly testing, assessing and evaluating the effectiveness of the data security measures.</b> | <b>existent</b><br><b>yes</b> |
| Records of processing activities are reviewed and at least updated annually (where applicable).   | X                             |
| Notification of new/changed data processing procedures to the Data Protection Officer.  | X                             |
| Notification of new/changed data processing procedures to the IT Security Officer.  | X                             |
| Processes for reporting new/changed procedures are documented.  | X                             |
| Security measures are subject to regular internal audits  | X                             |
| In the event of a negative outcome of the above-mentioned review, the security measures are adjusted, renewed and implemented in line with the risks involved.        | X                             |

**4.2 Control of instructions**

|   |                               |
|---|-------------------------------|
| <b>Control of instructions</b><br><b>It must be ensured that commissioned data processing by service providers (subcontractors) is only processed in accordance with the instructions of the Processor.</b> | <b>existent</b><br><b>yes</b> |
| Contracts according to the requirements of Art. 28 GDPR   | X                             |

|  |   |
|--|---|
| Centralized registration of commissioned service providers (contract management) | X |
|--|---|
